DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I : 1st species in fig. 2A-2F

Species I : 2nd species in fig. 3

Species I : 3rd species in fig. 4

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Art Unit: 2609

None.

The following claim(s) are generic: claims 1, 2, and 3..

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

In 1st species, a pen shaped optical mouse where light is illuminated outside the mouse body then reflected onto tip member.

In 2nd species, a pen shaped optical mouse is arranged in such a way that light illuminated is directly irradiated onto tip member.

In 3rd species, a ball is rotatably arranged at the position where the optical tip member of the optical mouse according to the 1st species.
